

Alejandro González Macías

Graduate in Computer Engineering – Software Engineering from the University of Seville, I am committed to developing efficient, high-quality software solutions. I have a solid foundation in programming, software design, and problem-solving, gained through my studies and academic and personal projects. I adapt easily to new environments, enjoy working both in a team and independently, and I am looking for an opportunity to grow professionally and add value to a technology company.

SKILLS

- Web development
- **Programming languages:** Java, JavaScript, TypeScript, Python, C#
- **Environments and runtimes:** Node.js
- **Frameworks / libraries:** React, React Native, Spring Boot, Django, NestJS, .NET, Angular, FastAPI
- **Testing:** xUnit (.NET), Jest (NestJS), JUnit (Spring Boot)
- **Databases:** PostgreSQL, Neo4J, Redis
- **DevOps:** Git, Docker, CI/CD (GitHub Actions)

EDUCATION

Bachelor's Degree in Software Engineering

University of Seville, Seville

09/2022 – 07/2026

Science track

IES Francisco Pacheco, Sanlúcar de Barrameda (Cádiz) 09/2020 – 06/2022

PROJECTS

Ukinory – Movie Recommendations from Letterboxd User Data

Full-stack movie recommendation platform based on Letterboxd data, featuring ZIP or CSV data import, personalized taste profiles, and a hybrid recommendation system combining embedding-based similarity and collaborative filtering. Integration with TMDb, Wikidata, and Redis for movie matching, metadata enrichment, and caching; guest and registered user authentication, LLM-generated recommendation explanations (via Gemini API), and Letterboxd-compatible data export.

Stack: Python/Django, TypeScript/React, PostgreSQL, Docker, Redis.

UltimateGGx – Match analysis and replay application

Full-stack web application that reconstructs a League of Legends match using data from the Riot Games API, allowing users to view a player's profile and match history and explore the development of each match through a minimap, an event timeline, and a scoreboard, with responsive design. Unit testing and deployment on Vercel (frontend), Render (backend), and Neon (database).

Stack: C#/.NET, xUnit, TypeScript/Angular, PostgreSQL, Docker.

KeaKit – Item rental and services platform

Collaborative web application developed by a team of 20 people using the Scrum methodology. Allows users to create customized “kits” by combining products and services, with dynamic pricing and integrated payments. Contributed to the development of new features, refactoring of existing components, and bug fixing. Unit and integration testing.

Stack: Java/Spring Boot, JUnit, TypeScript/React Native.

Other projects: **UltimateWatch** (TypeScript/NestJS, React, Socket.IO, PostgreSQL), **Zeolite** (Python/FastAPI, TypeScript/React, Neo4j), **Movies - IR** (Python, Jupyter Notebook, Scikit-learn, NLTK, Whoosh), **Charmaway** (Python/Django, PostgreSQL, Microsoft Project).

LANGUAGES

Spanish: Native

English: Advanced C1 (Cambridge English)
