

Alejandro González Macías

Graduate in Computer Engineering, specializing in Software Engineering, from the University of Seville. I have a solid foundation in software development, system design, and problem-solving, developed through academic and personal projects. I am comfortable learning and adapting to new technologies and environments, and I work effectively both independently and as part of a team. I am looking to grow as a Software Engineer, take on new challenges, and contribute to the development of efficient, high-quality software solutions.

SKILLS

- Web development
- **Programming languages:** Java, JavaScript, TypeScript, Python, C#
- **Environments and runtimes:** Node.js
- **Frameworks / libraries:** React, React Native, Spring Boot, Django, NestJS, .NET, Angular, FastAPI
- **Testing:** xUnit (.NET), Jest (NestJS), JUnit (Spring Boot)
- **Databases:** PostgreSQL, Neo4J, Redis
- **DevOps:** Git, Docker, CI/CD (GitHub Actions)

EDUCATION

Bachelor's Degree in Software Engineering

University of Seville, Seville

09/2022 – 07/2026

Science track

IES Francisco Pacheco, Sanlúcar de Barrameda (Cádiz) 09/2020 – 06/2022

PROJECTS

Ukinory – Recommendation and Data Processing Platform

Full-stack movie recommendation platform based on Letterboxd data. Developed import pipelines, taste profiles, and a hybrid recommendation system combining semantic embeddings and collaborative filtering, with Gemini-generated explanations. Integrated external APIs (TMDb, Wikidata), Redis caching, batch processing, and failure handling. Includes JWT authentication, data export, and real-time user taste comparison through WebSockets.

Stack: Python/Django, TypeScript/React, PostgreSQL, Docker, Redis.

UltimateGGx – Data Analysis and Real-Time Match Visualization

Full-stack application for processing and visualizing complex event-based data from the Riot Games API. Implemented data ingestion and transformation, interactive event timelines, real-time match reconstruction, and responsive data visualization. Includes unit testing and deployment across Vercel, Render, and Neon.

Stack: C#/.NET, xUnit, TypeScript/Angular, PostgreSQL, Docker.

KeaKit – Full-Stack E-Commerce and Service Platform

Collaborative web application developed by a 20-person team using Scrum. Implemented features for dynamic product and service composition, pricing, and integrated payments. Contributed to feature development, component refactoring, bug fixing, and unit and integration testing within a large-scale team codebase.

Stack: Java/Spring Boot, JUnit, TypeScript/React Native.

Other projects: **UltimateWatch** (TypeScript/NestJS, React, Socket.IO, PostgreSQL), **Zeolite** (Python/FastAPI, TypeScript/React, Neo4j), **Movies - IR** (Python, Jupyter Notebook, Scikit-learn, NLTK, Whoosh), **Charmaway** (Python/Django, PostgreSQL, Microsoft Project).

LANGUAGES

Spanish: Native

English: Advanced C1 (Cambridge English)
